

Tugas Mata Kuliah Pemrograman Website
Laporan Hasil Pengerjaan Aktivitas Mandiri

Oleh :

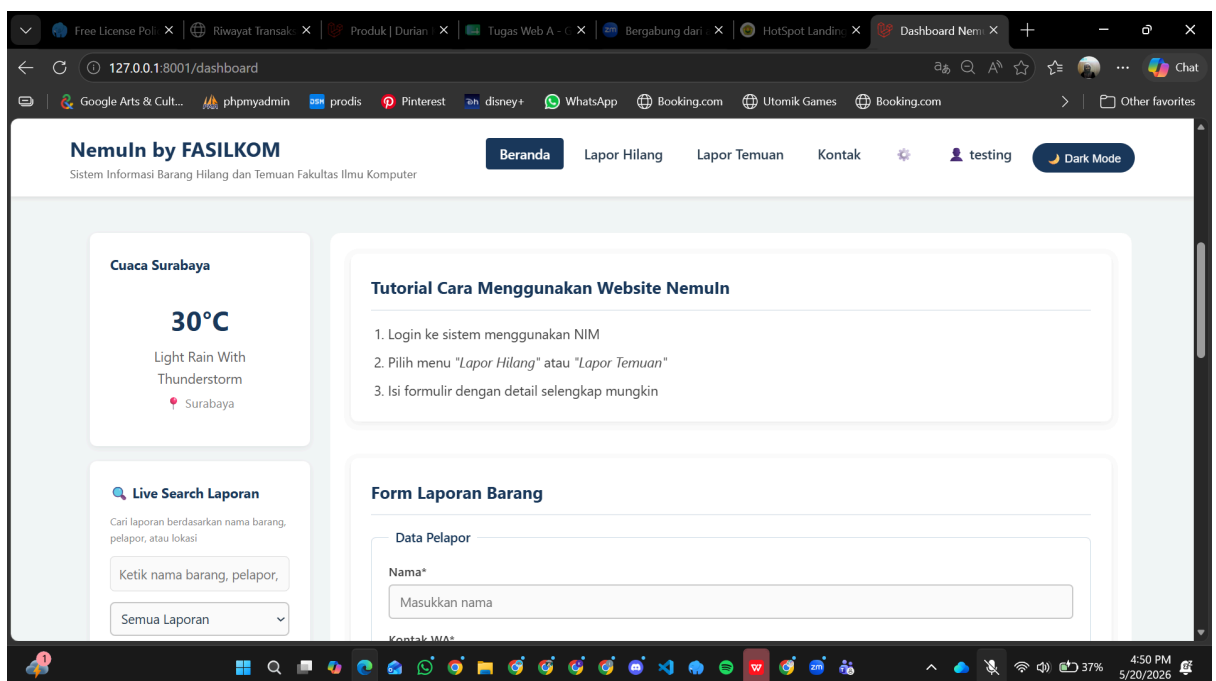

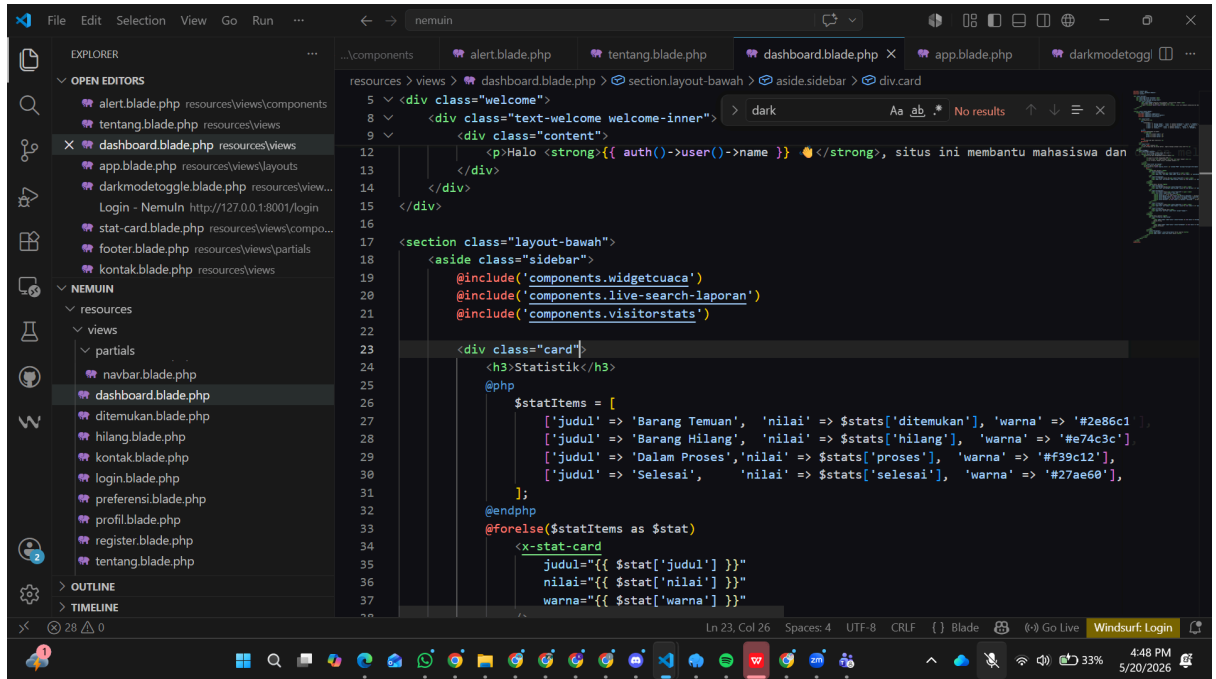

Kanina Audythia Ramlan (242410101045)

PROGRAM STUDI SISTEM INFORMASI
FAKULTAS ILMU KOMPUTER
UNIVERSITAS JEMBER

2026

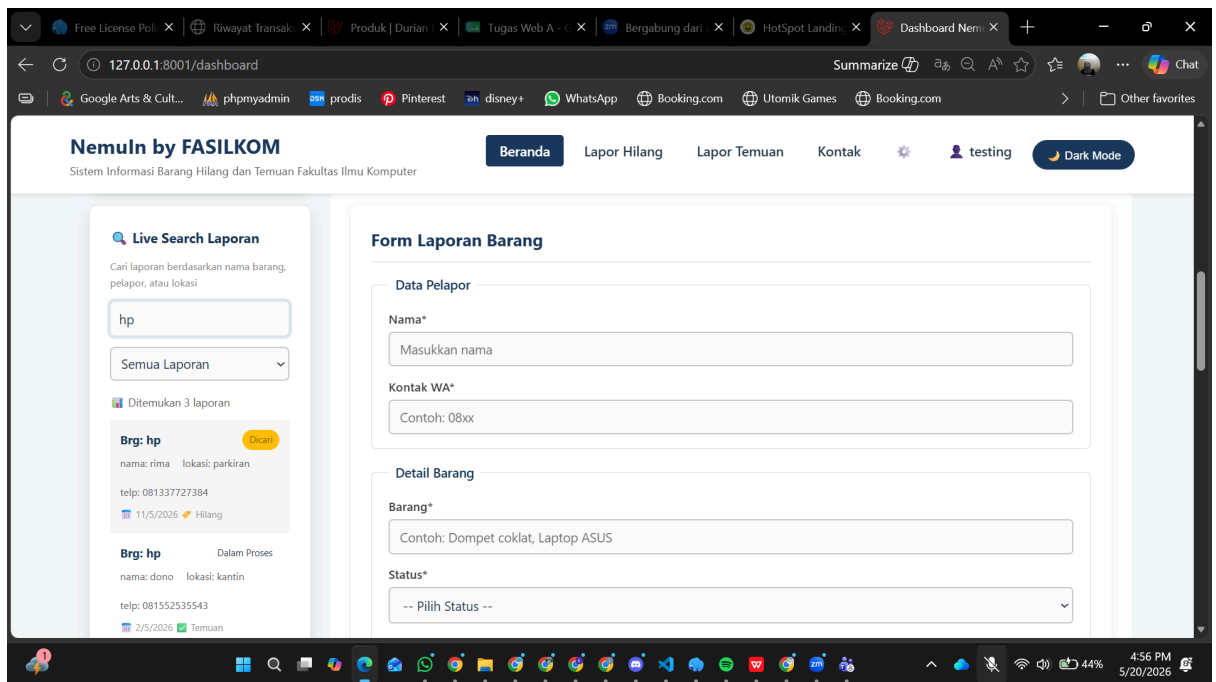

SISTEM PENCARIAN & NOTIFIKASI

1. Buat section yang menampilkan data cuaca kota Surabaya menggunakan API publik <https://wttr.in/Surabaya?format=j1> (gratis, tidak perlu API key). Tampilkan: nama kota, suhu saat ini (dalam °C), dan deskripsi cuaca. Gunakan async/await dan tampilkan loading indicator saat data sedang diambil.

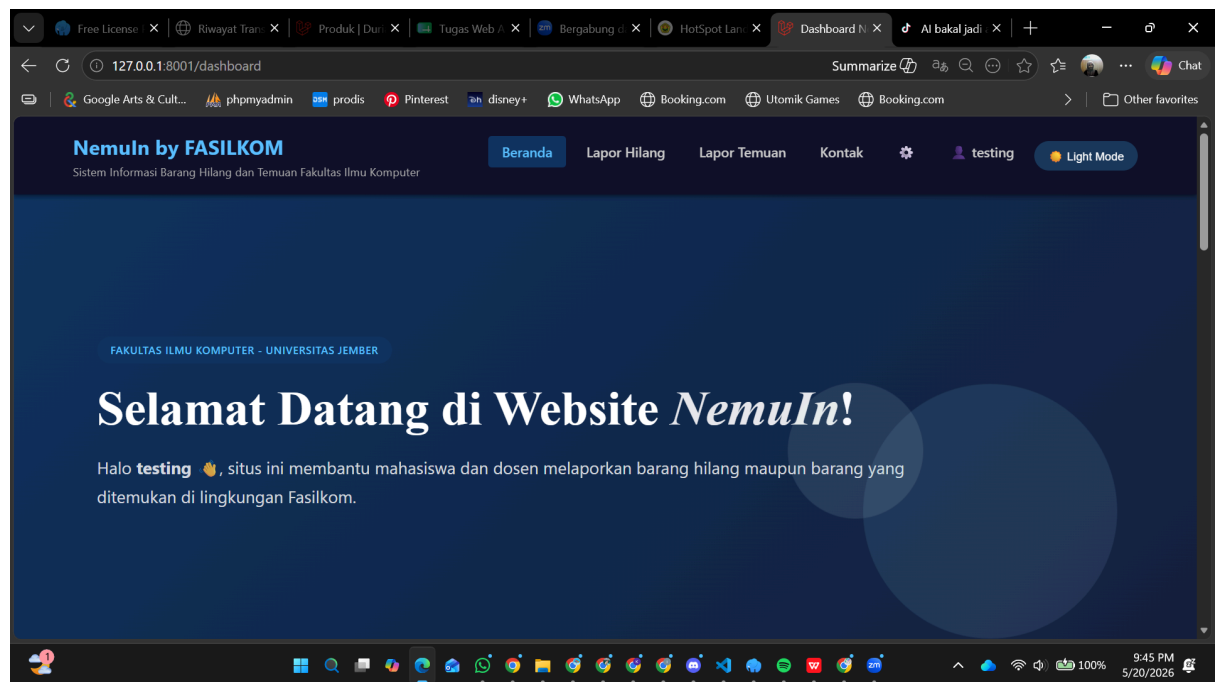

2. Buat live search yang memiliki form sederhana untuk mencari mahasiswa. Form dikirim via AJAX POST/ GET ke Laravel — halaman tidak boleh reload sama sekali.

Setelah berhasil, catatan baru langsung muncul di daftar bawah tanpa refresh. Gunakan CSRF token yang benar.

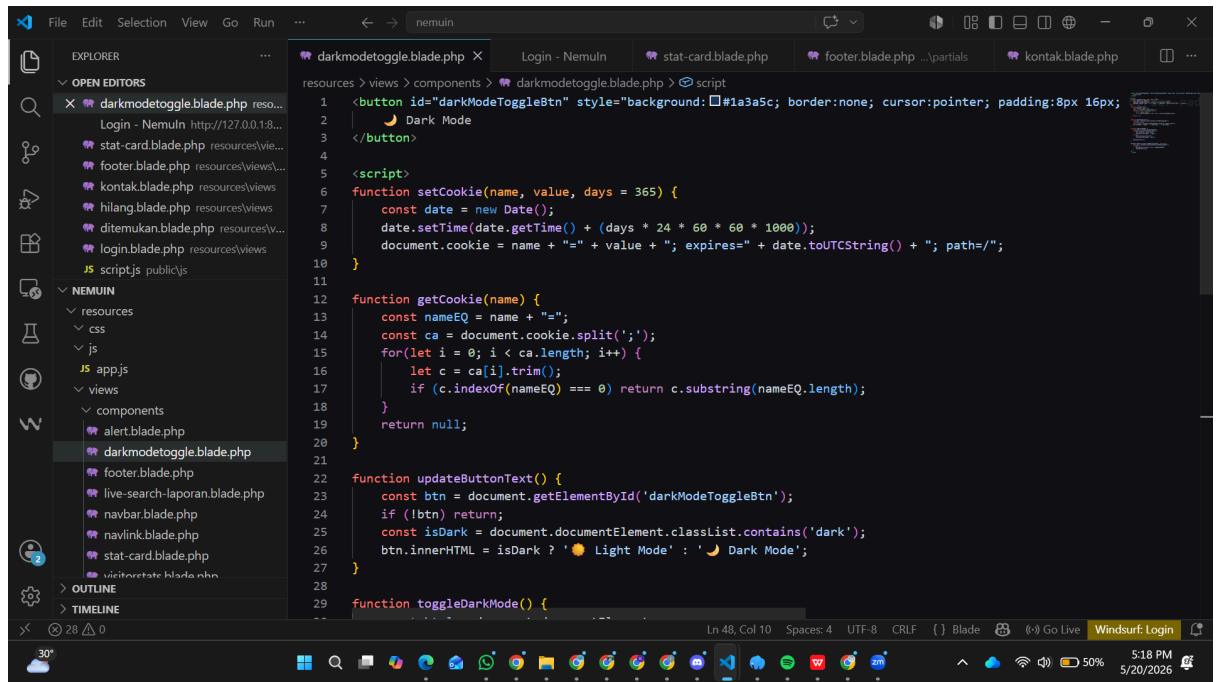

3. Buat navbar untuk mengeset dark mode.

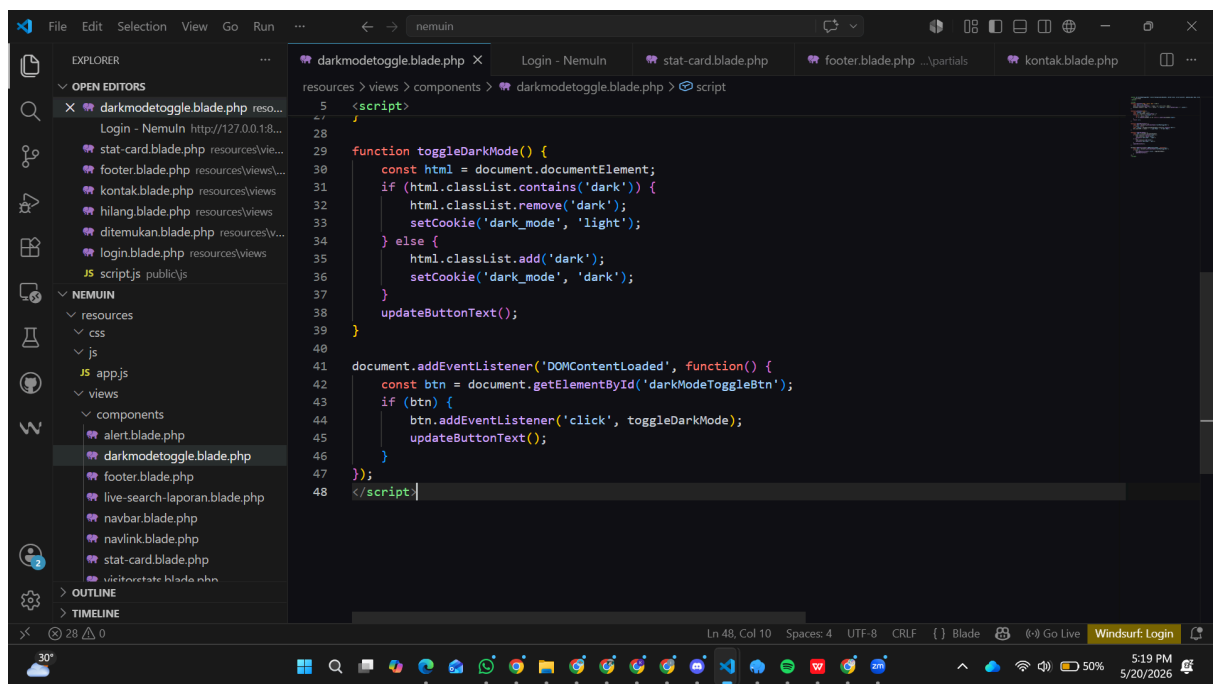

a. Tambahkan dark mode ke konfigurasi Tailwind (darkMode: 'class' di [tailwind.config.js](#))

b. Buat helper function JavaScript: setCookie, getCookie, deleteCookie

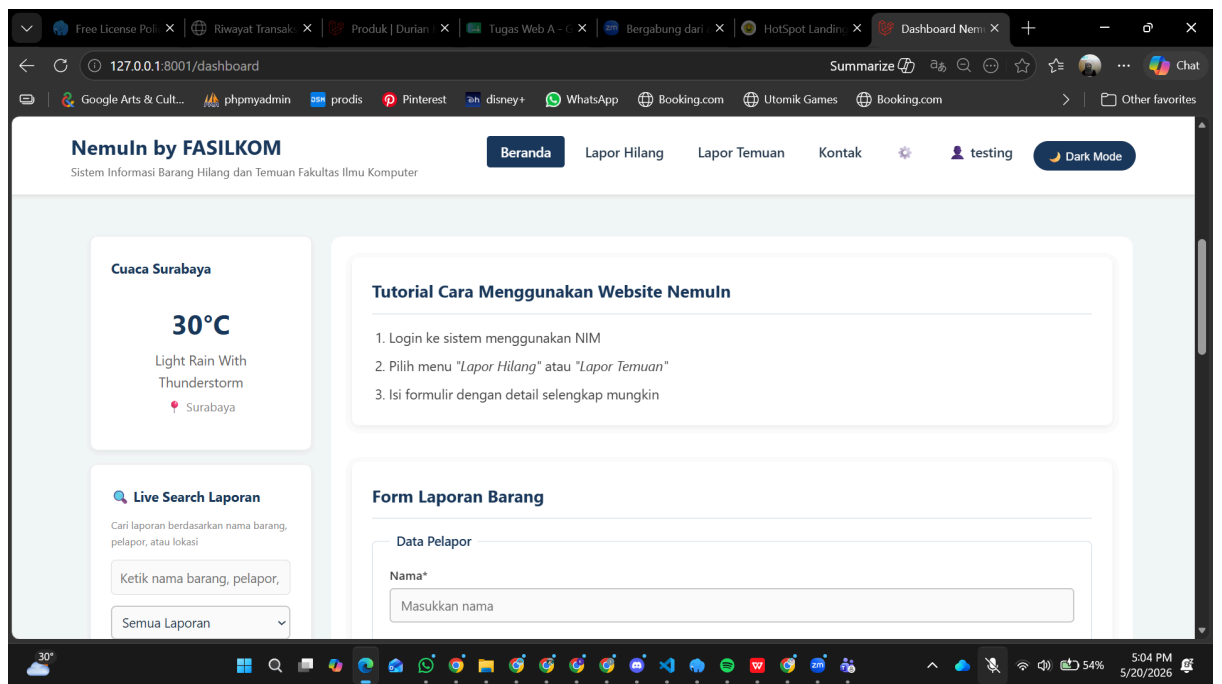

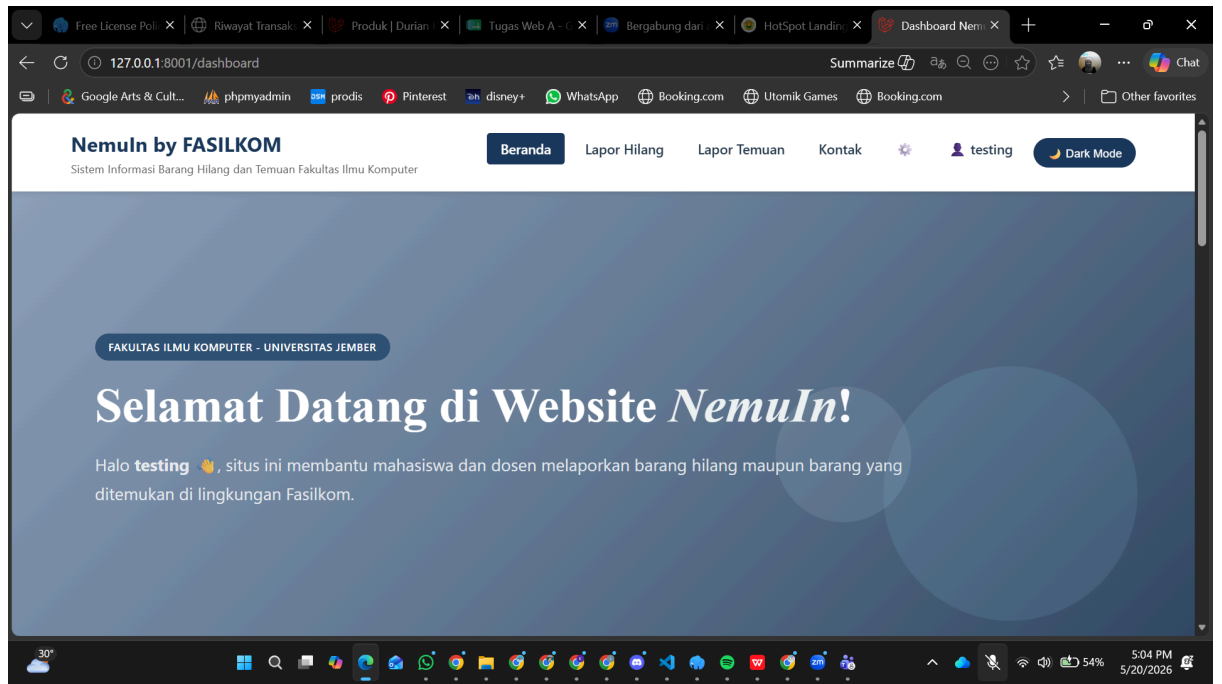

```
1 <button id="darkModeToggleBtn" style="background: #1a3a5c; border:none; cursor:pointer; padding:8px 16px;
2     Dark Mode
3 </button>
4
5 <script>
6 function setCookie(name, value, days = 365) {
7     const date = new Date();
8     date.setTime(date.getTime() + (days * 24 * 60 * 60 * 1000));
9     document.cookie = name + "=" + value + "; expires=" + date.toUTCString() + "; path=/";
10 }
11
12 function getCookie(name) {
13     const nameEQ = name + "=";
14     const ca = document.cookie.split(';');
15     for(let i = 0; i < ca.length; i++) {
16         let c = ca[i].trim();
17         if (c.indexOf(nameEQ) === 0) return c.substring(nameEQ.length);
18     }
19     return null;
20 }
21
22 function updateButtonText() {
23     const btn = document.getElementById('darkModeToggleBtn');
24     if (!btn) return;
25     const isDark = document.documentElement.classList.contains('dark');
26     btn.innerHTML = isDark ? 'Light Mode' : 'Dark Mode';
27 }
28
29 function toggleDarkMode() {
```

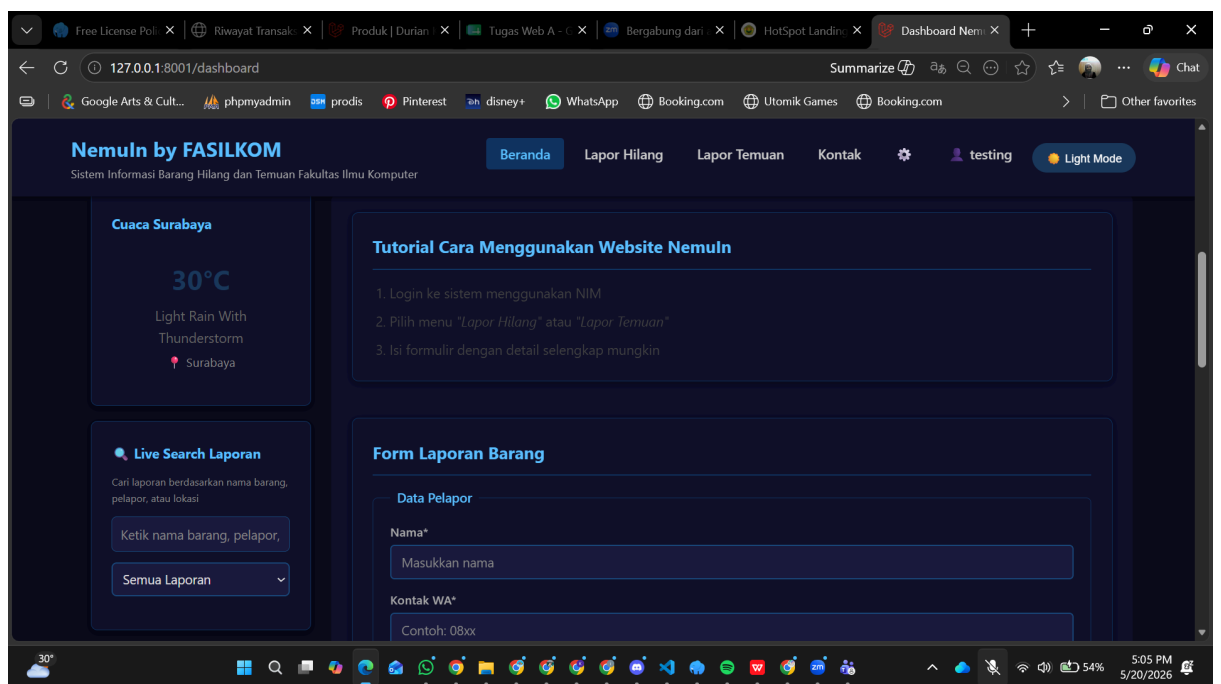

```
30     const html = document.documentElement;
31     if (html.classList.contains('dark')) {
32         html.classList.remove('dark');
33         setCookie('dark_mode', 'light');
34     } else {
35         html.classList.add('dark');
36         setCookie('dark_mode', 'dark');
37     }
38     updateButtonText();
39 }
40
41 document.addEventListener('DOMContentLoaded', function() {
42     const btn = document.getElementById('darkModeToggleBtn');
43     if (btn) {
44         btn.addEventListener('click', toggleDarkMode);
45         updateButtonText();
46     }
47 });
48 </script>
```

c. Implementasikan toggle dark mode: klik tombol → toggle class 'dark' di HTML
→ simpan ke cookie

i. Light mode

Ii. Dark mode

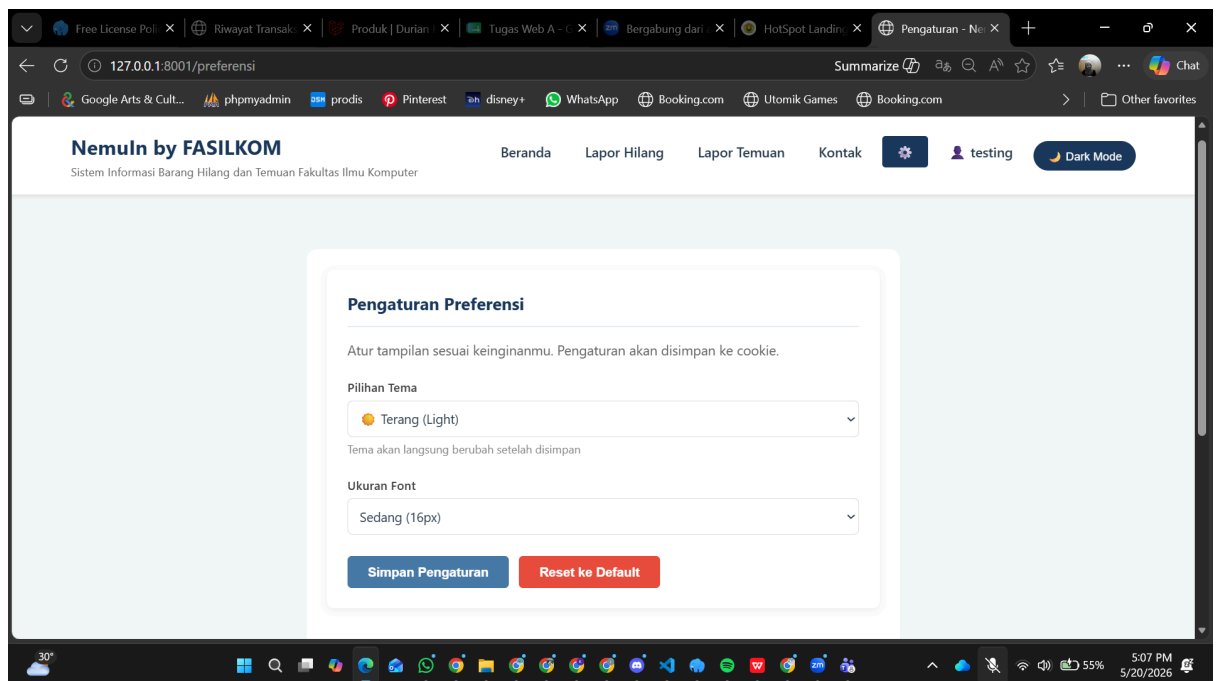

- d. Terapkan cookie di awal load (dalam tag script di <head>) untuk mencegah flash of unstyled content

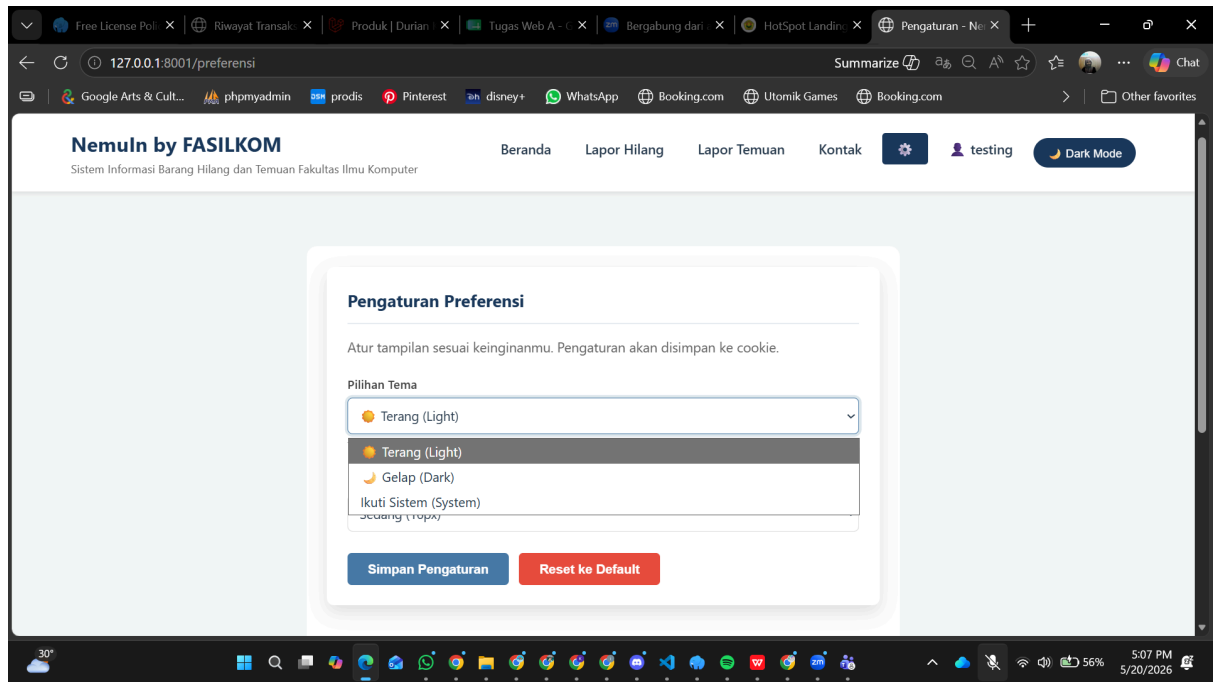

```

1 <!DOCTYPE html>
2 <html lang="en" id="html-root">
3 <head>
4 <meta charset="UTF-8">
5 <meta name="viewport" content="width=device-width, initial-scale=1.0">
6 <meta name="csrf-token" content="{{ csrf_token() }}">
7 <link rel="stylesheet" href="{{ asset('css/style.css') }}">
8 <title>@yield('title') - NemuIn</title>
9 <link href="https://fonts.googleapis.com/css2?family=Lora:ital,wght@0,400;0,600;1,400&display=swap" rel="stylesheet">
10 @stack('styles')
11 <script>
12 (function() {
13     function getCookie(name) {
14         const nameEQ = name + "=";
15         const ca = document.cookie.split(';');
16         for (let i = 0; i < ca.length; i++) {
17             let c = ca[i].trim();
18             if (c.indexOf(nameEQ) === 0) return c.substring(nameEQ.length);
19         }
20         return null;
21     }
22     const fontSize = getCookie('font_size');
23     if (fontSize) {
24         const sizes = { small: '12px', medium: '16px', large: '20px' };
25         document.documentElement.style.fontSize = sizes[fontSize] || '16px';
26     }
27     if (getCookie('dark_mode') === 'dark') {
28         document.documentElement.classList.add('dark');
29     }
30 })();
31 </script>
32 </head>
33 <body>
34 @include('partials.navbar')
35
36 @if(session('success'))

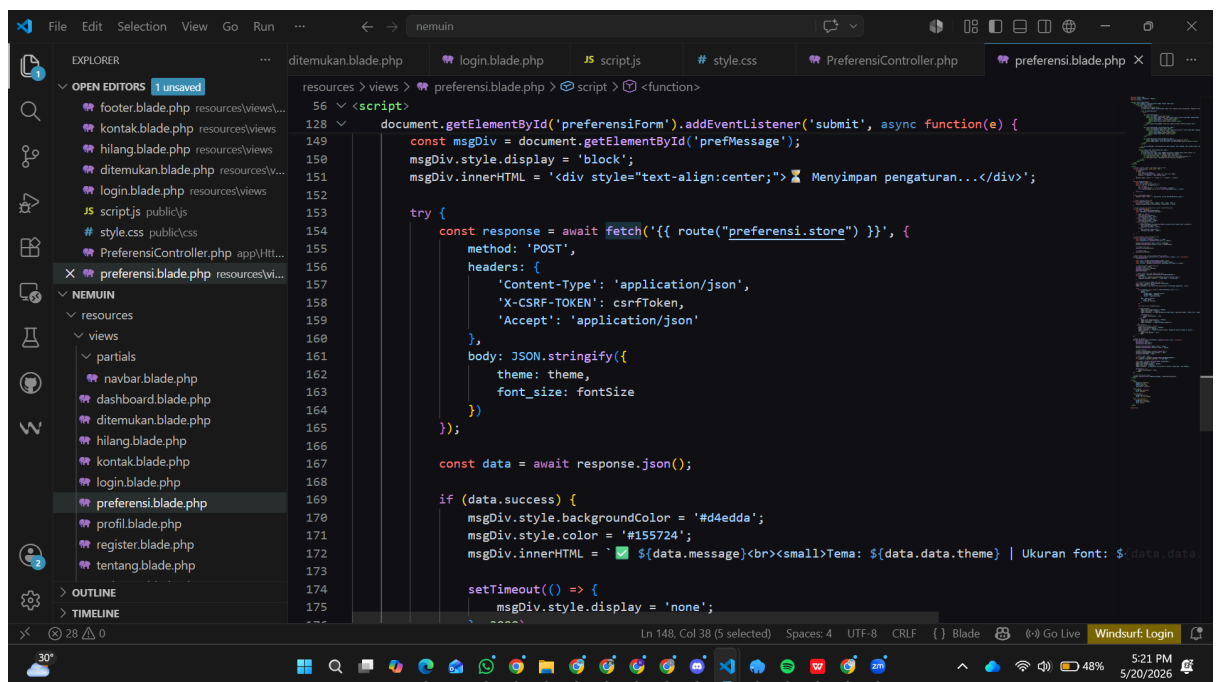

```

e. Buat halaman pengaturan /preferensi dengan form: pilihan tema (light/dark/system), pilihan ukuran font

f. Simpan form ke cookie via Fetch POST ke endpoint Laravel

```

resources > views > preferensi.blade.php > script > <function>
56 <script>
128 document.getElementById('preferensiForm').addEventListener('submit', async function(e) {
167     const data = await response.json();
168
169     if (data.success) {
170         msgDiv.style.backgroundColor = '#d4edda';
171         msgDiv.style.color = '#155724';
172         msgDiv.innerHTML = '✅ ${data.message}<br><small>Tema: ${data.data.theme} | Ukuran font: $
173
174         setTimeout(() => {
175             msgDiv.style.display = 'none';
176         }, 3000);
177     } else {
178         msgDiv.style.backgroundColor = '#f8d7da';
179         msgDiv.style.color = '#721c24';
180         msgDiv.innerHTML = '❌ Gagal menyimpan pengaturan.';
181     }
182 } catch (error) {
183     console.error('Error:', error);
184     msgDiv.style.backgroundColor = '#f8d7da';
185     msgDiv.style.color = '#721c24';
186     msgDiv.innerHTML = '❌ Terjadi kesalahan koneksi. Pengaturan tetap tersimpan di cookie.';
187     setTimeout(() => {
188         msgDiv.style.display = 'none';
189     }, 3000);
190 }
191 });
192
193 // Reset ke default
194

```

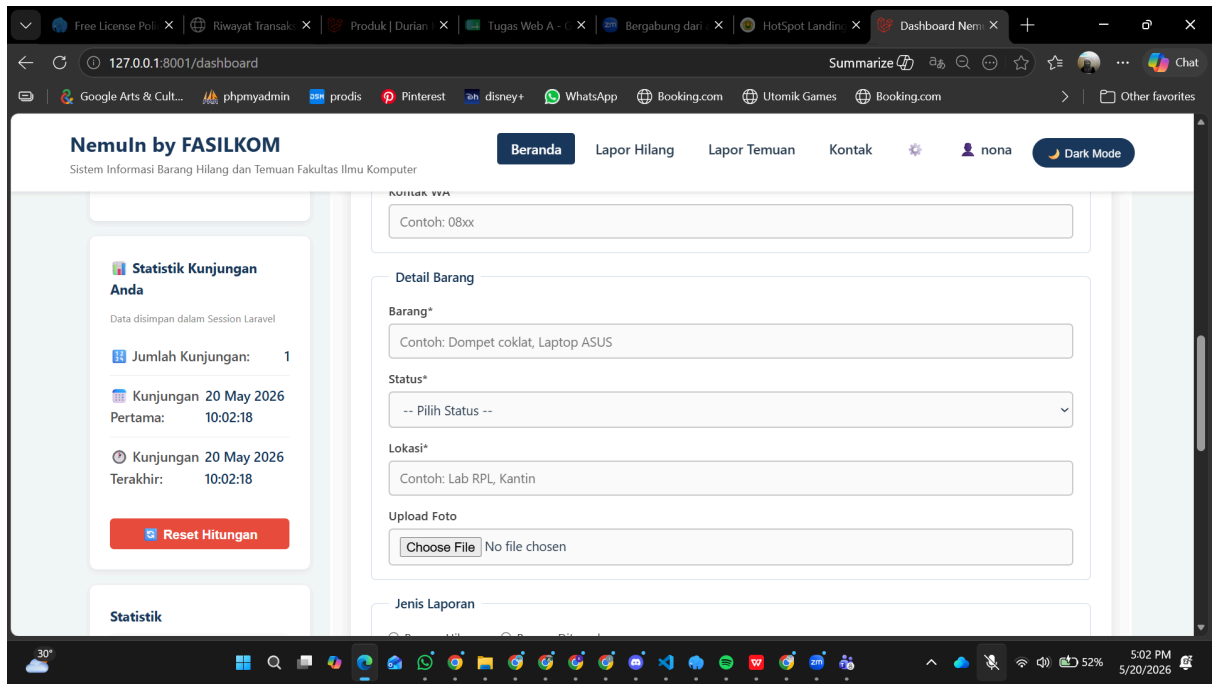

g. Laravel Controller: baca cookie dari `$request->cookie()`, kembalikan JSON konfirmasi

```

app > Http > Controllers > PreferensiController.php > PHP Intellisense > PreferensiController > store
3 namespace App\Http\Controllers;
4
5 use Illuminate\Http\Request;
6
7 class PreferensiController extends Controller
8 {
9     public function index()
10     {
11         return view('preferensi');
12     }
13
14     public function store(Request $request)
15     {
16         $request->validate([
17             'theme' => 'required|in:light,dark,system',
18             'font_size' => 'required|in:small,medium,large'
19         ]);
20
21         $currentTheme = $request->cookie('dark_mode');
22         $currentFont = $request->cookie('font_size');
23
24         return response()->json([
25             'success' => true,
26             'message' => 'Pengaturan berhasil disimpan!',
27             'data' => [
28                 'theme' => $request->theme,
29                 'font_size' => $request->font_size,
30                 'old_theme' => $currentTheme,
31                 'old_font' => $currentFont
32             ]
33         ]);
34     }
35 }

```

4. Buat section yang menghitung berapa kali pengguna mengunjungi halaman tersebut menggunakan session Laravel. Tampilkan: jumlah kunjungan, waktu kunjungan pertama, dan waktu kunjungan terakhir. Sediakan tombol "Reset Hitungan" yang menghapus data dari session dan mengulang dari awal.
 - a. Tampilan di halaman customer

b. Tampilan di halaman admin
